**Amendments to the Specification**

**Please replace the Abstract with the following amended Abstract**

A server-created channel information (spotlight window) user interface that selectively overlays a broadcast video presentation from the server. Selection of the channel information user interface is controlled by signals from a remote control. The channel information user interface supports navigation of available channels and supports mode restricted navigation within a predetermined subset of available channels. The background broadcast video can change in synchronization with navigation or the background broadcast video can remain fixed on an existing channel.
